# WEATHER OF CONCERN

## Weather of Concern

- Critical fire weather conditions possible for portions of Southern California, due to gusty winds and low relative humidity.

## **Active Weather Warnings, Watches and Advisories by County:**

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# **WEATHER SYNOPSIS BY REGION**

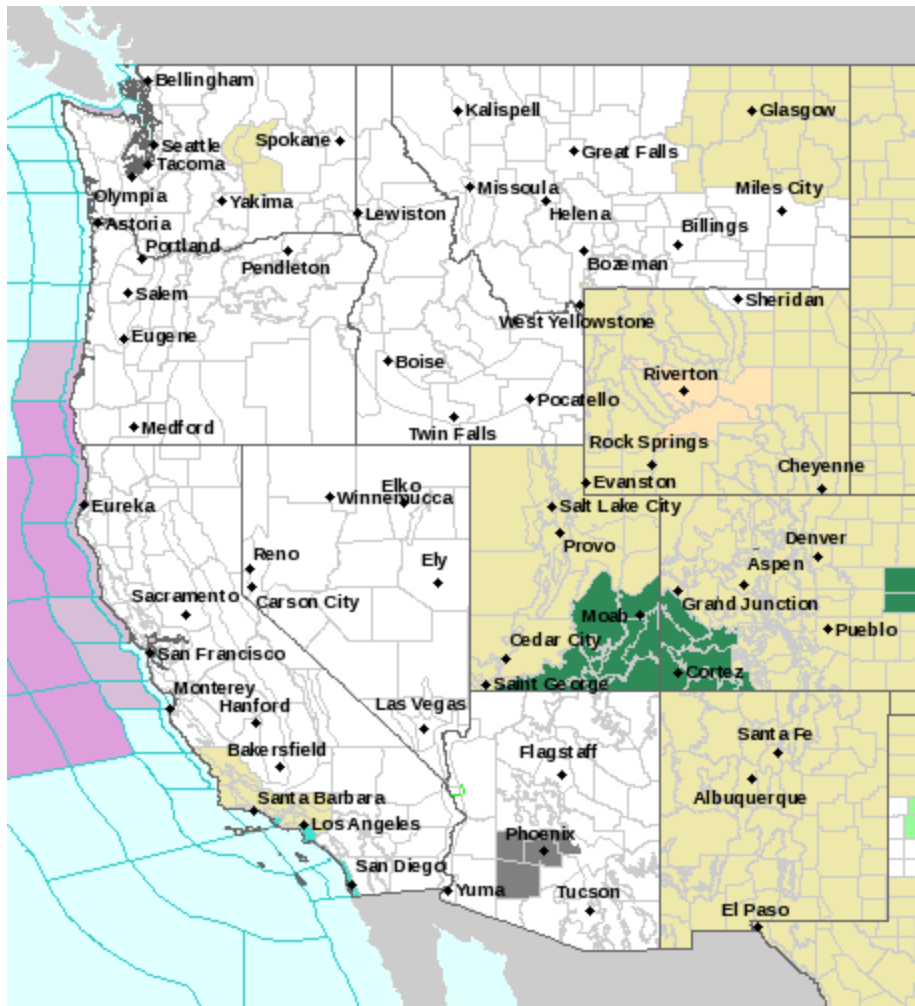

## **NORTHERN CALIFORNIA**

Small chances of isolated afternoon and evening thunderstorms today through the weekend, mainly over the eastern mountains today and NW mountains for the weekend. The very southern edge of a Gulf of Alaska low will begin moving into the region later today and will take over the weather pattern through the holiday weekend into next week. Even with a weak trough over the region, hot, dry weather will continue in most areas well into next week. However, there will be a slow cooling trend through next Wednesday. Today will continue to see triple digit afternoon high temperatures within a few degrees of 105, Saturday and Sunday will be more around 100, and early next week in the mid and upper 90s. Low afternoon RH and mostly moderate overnight RH recovery will also continue in most areas away from the marine layer. A bit more moisture will be over Northern California today and into the weekend. Daily afternoon cumulus clouds are expected to develop over the northern and eastern mountains. There will be a chance of isolated afternoon and evening thunderstorms over the eastern mountains, mainly from around Mt. Lassen southward. These storms should have some moisture, but not a lot. Isolated afternoon and evening thunderstorms are not likely to form over the NW mountains Friday through the weekend, but a small chance of that occurring can't be ruled out, either. Any that do form there may have more average amounts of precipitation (be wetter than those anticipated over the eastern mountains Friday). Diurnal, locally driven afternoon wind patterns will prevail in most areas, so seasonable wind speeds and directions are expected during the afternoon peak burning period each day. There will be light overnight northerly winds overall, but portions of the northern Sacramento Valley will have somewhat stronger speeds this morning than have been occurring. At this time, NO HIGH RISK conditions through the next 7 days are anticipated.

## **SOUTHERN CALIFORNIA**

Expect a Slow Cooling Trend through the Weekend. A weak trough will develop over the region, which will lead to slightly cooler temperatures over the next few days. Highs will drop to near normal by the weekend with valley temperatures in the upper 80s to lower 90s. Onshore flow will increase a bit each day which will lead to more extensive marine layer coverage by Saturday. A deeper marine layer should bring minimum RH readings back into the teens today and Saturday. Isolated storms will be possible again this afternoon, but no further convection is expected over the weekend. Long range models indicate warmer weather will likely return by the middle of next week.
